PRODUCTION, CONSTRUCTION AND PUBLIC UTILITIES

Agriculture, Fishery and Forestry Production – data on volume of production are presented on a calendar year basis following the revised format of the Philippine Statistics Authority (PSA). The unit of measure used is thousand metric tons, except for logs which are in thousand cubic meters.

Agricultural Land Utilization by Type of Crop – is the total area planted/harvested in thousand hectares by crop type.

Logs and Lumber Production – is the total production of logs and lumber in cubic meters based on the Forestry Sector Report of the Department of Environment and Natural Resources (DENR).

Gold and Silver Production – is the total production of gold and silver in kilograms as compiled by the Mines and Geosciences Bureau (MGB).

Permit Valuation of Private Building Construction – refers to the value declared (in thousand Philippine pesos) in the permit of all buildings to be constructed in the National Capital Region (NCR) including residential, non-residential, as well as additions, alterations, and repairs.

> "Residential" is a building for which its major parts or more than half of its gross floor area is built for dwelling purposes. This type of building can be of the single type, duplex, apartment and/or accessoria, and residential condominium.
>
> "Non-residential" buildings are those built for commercial, industrial, and agricultural purposes or those not used for living quarters such as office buildings, factories, sheds, warehouses, and plants (including hospitals, recreational, social, educational, charitable, religious, and other similar institutional structures). "Additions, alterations and repairs" include reconstructed buildings actually constructed in the NCR. These comprise the number of permits granted or approved by the City Engineer's Office for such purpose.

Gross Energy Generation – is the energy/electricity produced by the remaining National Power Corporation (NPC) plants which were transferred to the Power Sector Assets and Liabilities Management Corporation (PSALM) pending its privatization.

Electricity Consumption – refers to the electric power or energy consumed by the end-users to generate desired output (i.e., light, heat, kinetic, etc.), usually measured in kilowatt-hours (kWh). The data presented here are in Gigawatt-hours (GWh)* and refer to energy consumed by large

manufacturing establishments within the franchise area of Manila Electric Company (Meralco). The franchise area includes NCR and several cities and municipalities in the surrounding provinces.

Notes:
* 1 Gigawatt-hour (GWh) = 1,000,000 kilowatt-hours (kWh)
** Large manufacturing establishments have minimum demand of 40 kWh
