

Business Expectations Survey ¹

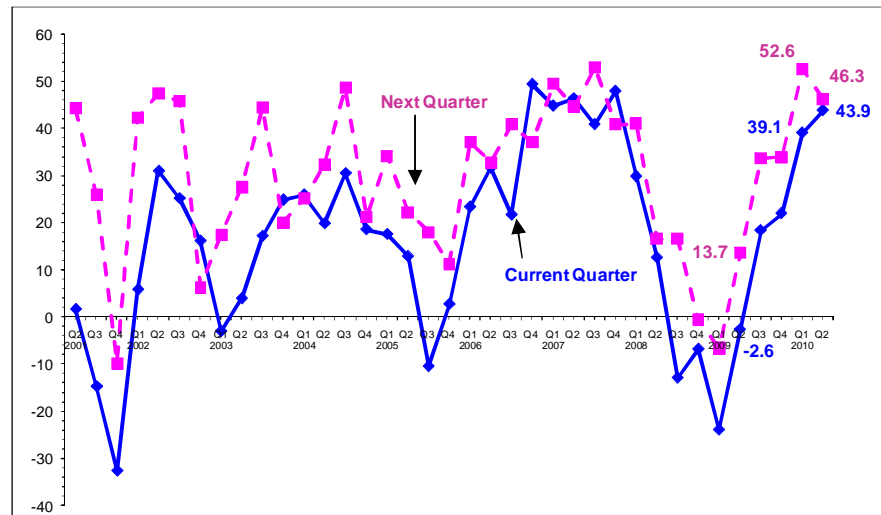

Second Quarter 2010

5/20/2010 4:51 PM

Businesses More Optimistic in Q2 2010

Overall Business Outlook on the Macroeconomy

Overall Business Confidence Index Q2 2001 – Q2 2010

Business confidence rises to a near high in Q2 2010.

Business sentiment was more buoyant in the second quarter of 2010, with the overall confidence index (CI)² rising to 43.9 percent from 39.1 percent in Q1 2010 and -2.6 percent in Q2 2009. The current quarter CI approximated pre-2008 crisis levels when business optimism reached its peak during the period Q4 2006 - Q4 2007, ranging from a low of 40.9 percent in Q3 2007 to a high of 49.4 percent in Q4 2006. The improved business outlook is consistent with the expected broad-based, solid economic growth this year which draws support from the recovery in export revenues, moderate inflation, steady growth of overseas Filipinos' (OFs) remittances and stable peso. Businesses also attributed their bullish outlook to the anticipated higher consumer spending attendant to the May national elections. The favorable business sentiment likewise mirrored the improving business confidence in countries such as Hong Kong, Indonesia, Singapore, Germany, Italy, and the United States.

Meanwhile, the next quarter (Q3 2010) confidence index remained high at 46.3 percent but fell slightly compared to 52.6 percent a quarter ago

¹ The Business Expectations Survey (BES) is a quarterly survey of leading firms drawn from the Securities and Exchange Commission's Top 7000 Corporations. Results of the BES provide advance indication of the direction of the change in the overall business activity in the economy and in the various measures of activity at the companies' own operations as well as in selected economic indicators.

² The CI is computed as the percentage of firms that answered in the affirmative less the percentage of firms that answered in the negative with respect to their views on a given indicator. A positive CI indicates a favorable view, except for the inflation rate and the peso-borrowing rate, where a positive CI indicates the opposite.

due to the seasonal slowdown in business activity during the rainy season.

Both NCR and AONCR respondents are more optimistic.

Business optimism in both the National Capital Region (NCR) and Areas Outside NCR (AONCR) continued to improve in Q2 2010 relative to the outlook prevailing a quarter ago. NCR respondents were notably more positive in their business outlook than respondents based in AONCR, indicating that economic conditions and prospects remained more favorable in NCR compared to that in AONCR.

An analysis of AONCR respondents (consisting of Regions I, III, IV, VII, XI, and XII)³ showed that businesses remained broadly optimistic, especially those in Regions III, VII and XII whose outlook turned more favorable in Q2 2010 partly due to the upbeat mood of the industry and services sectors. Meanwhile, business outlook in Regions IV and XI remained steady in Q2 2010 while respondents in Region I were less optimistic, citing the negative impact of higher power costs and the El Niño weather conditions on business activity.

The favorable readings of business sentiment in NCR and the regions were also reflected in their Q3 2010 (next quarter) outlook, although slightly lower compared to their quarter ago levels.

Recovery in global trade lifts sentiment of exporters and those engaged in dual activity.

Following the continued gradual recovery in global trade and improved external demand for Philippine goods, respondents involved in exporting and dual international trading were the most bullish in their outlook for Q2 and Q3 2010, with the CIs reaching all-time high levels since the nationwide survey commenced in Q1 2007.

Medium- and large-sized firms are the most optimistic in the current and next quarters.

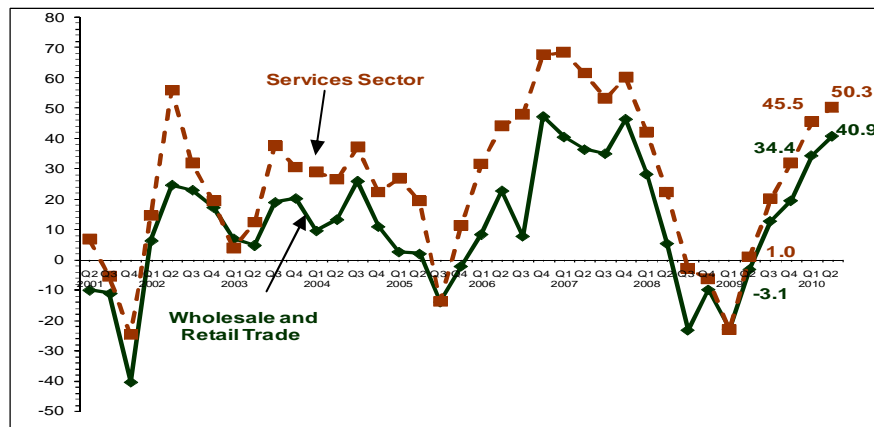

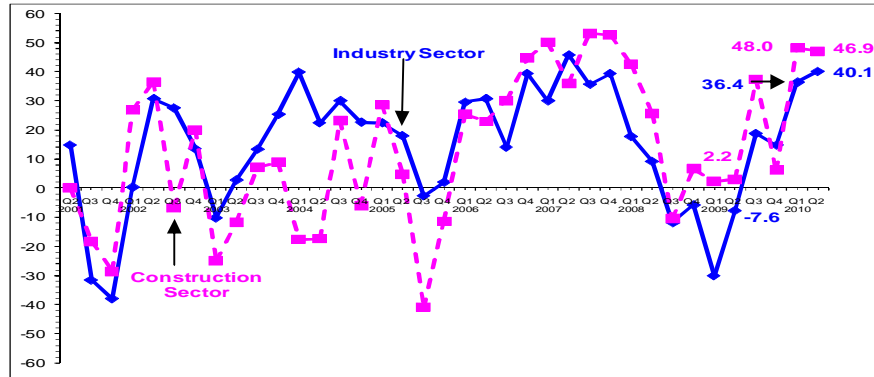

All firms, regardless of the size of operations, remained positive in their business outlook in the current and next quarters. Large firms were the most optimistic followed by the medium and small firms.

³ While the survey covered 17 regions, the bulk of the respondents were from Regions I, III, IV, VII, XI and XII. Region I (Ilocos) includes the provinces of Ilocos Norte, Ilocos Sur, La Union and Pangasinan; Region III (Central Luzon) is composed of Aurora, Bataan, Bulacan, Nueva Ecija, Pampanga, Tarlac and Zambales; Region IV (Southern Tagalog) comprises Cavite, Laguna, Batangas, Marinduque, Occidental Mindoro, Oriental Mindoro, Palawan, Quezon, Rizal and Romblon; Region VII (Central Visayas) covers Cebu, Bohol, Negros Oriental and Siquijor; Region XI (Davao) consists of Compostela Valley, Davao del Norte, Davao del Sur and Davao Oriental; and Region XII (SOCCSKSARGEN) is made up of North Cotabato, Sultan Kudarat, South Cotabato and Sarangani.

Sectoral Outlook

**Current Quarter Business Outlook Index by Sector
Q2 2001 – Q2 2010**

Optimism remains across sectors... Reflecting the improved overall business sentiment on the macroeconomy, businesses across sectors continued to have a more favorable outlook in Q2 2010.

The services sector had the most positive outlook, pulled up largely by the heightened optimism of the financial intermediation sub-sector, which benefited from key reforms that helped ensure steady asset expansion, improving overall asset quality and ample liquidity and solvency of the domestic banking system. Contributing also to the improved sentiment of the services sector were the buoyant outlook of the renting and business activities as well as hotels and restaurants sub-sector.

The sentiment of the industry sector continued to improve, with mining and quarrying, and manufacturing exhibiting greater optimism. Improving metal prices and the robust growth in exports, particularly the rebound in the country's top dollar earner – electronics, provided the impetus for a more positive outlook in Q2 2010.

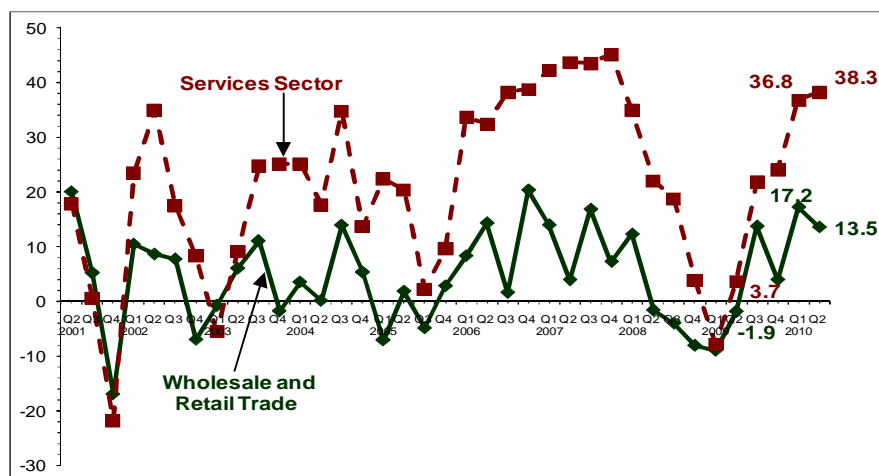

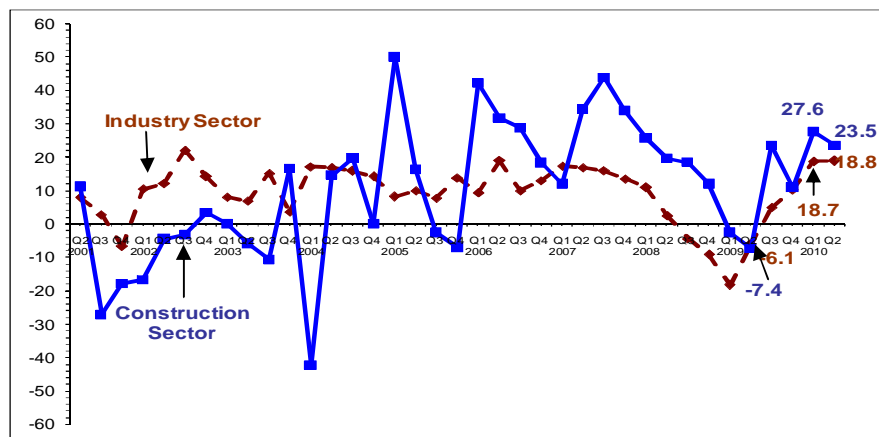

Similarly, the level of optimism of the wholesale and retail trade sector remained high, buoyed by respondents' expectations of higher consumer spending in the domestic market due partly to the opening of the school year in June and election-related spending that spurred business activity in the sector.

Meanwhile, the business outlook of the construction sector remained upbeat and stable.

Expectations for the next quarter tracked those in the current quarter with all sectoral indices moving on an uptrend year-on-year. Consistent with the usual downtrend in the business cycle during the rainy season, all sectors' outlook for Q3 2010 declined quarter-on-quarter.

Business Confidence on Own Operations

**Business Confidence Index on Own Operations by Sector
Current Quarter, Q2 2001 – Q2 2010**

... as well as on own business operations. Businesses' outlook about their own operations showed a mixed pattern across sectors. The industry and services sectors indicated a more positive outlook, partly explained by the expected increase in the total orders and improved business activity. Meanwhile, the optimism of the other two sectors, although remaining positive, declined quarter-on-quarter. The expected pile-up of inventory due to sluggish activity in the wholesale and retail trade sector in the previous quarter slightly pulled down the sentiment of wholesalers and retailers.

Average capacity utilization increases. The average capacity utilization in Q2 2010 rose to 74.1 percent from the previous quarter's 72.0 percent, indicating more favorable business activity in the industry sector. This is consistent with the results of the Monthly Integrated Survey of Selected Industries (MISSI) of the National Statistics Office (NSO), which showed an increasing trend for capacity utilization for the period January – February 2010.⁴

Access to Credit and Financial Condition

Credit access and financial conditions of firms are more favorable. Credit access continued to be favorable in Q2 2010 as more firms reported a significant increase in their access to credit compared with their quarter- and year-ago levels. Financial conditions likewise improved but remained tight as the index remained in the negative territory at -5.0 percent. These survey results could possibly be due to the combined effects of continued easing of banks' credit standards and tightening conditions of the firms' loan contracts.

Employment and Expansion Plans

Employment expectations show a high level of optimism in the next quarter. The employment outlook index at 19.9 percent, although lower from its quarter-ago level, indicated that hiring of additional employees is expected to continue in Q3 2010. Favorable employment prospects were anticipated in the services sector (specifically renting and business activities, and financial intermediation sub-sectors).

More firms have plans for expansion. Consistent with the more positive outlook of the industry sector about their own operations, more firms indicated expansion plans for Q3 2010. Expansion plans were noted across all sub-sectors, with the mining and quarrying sub-sector recording the highest year-on-year growth.

Business Constraints

Competition, weak demand, and financial problems limit business activity. Competition, weak demand (leading to low sales volume), and financial problems were the key challenges to business activity in Q2 2010. These three business constraints were the same factors identified by the respondents since Q1 2009.

⁴ The average capacity utilization on MISSI was based on a sample of large manufacturing firms while that of the BES used sample firms from the industry and construction sectors.

Expectations on Key Economic Indicators⁵

Higher inflation and interest rates as well as a stronger peso are expected in Q2 and Q3 2010.

Respondent firms expected inflation and interest rates to go up and the peso to appreciate in Q2 and Q3 2010. However, fewer respondents during the quarter expected that inflation and interest rates would go up compared with the previous quarter's survey results. In contrast, more firms expected the peso to appreciate compared with their quarter- and year-ago levels.

The anticipated appreciation of the peso in Q2 and Q3 2010 could stem from sustained foreign exchange inflows arising from the improved performance of exports, steady OF remittances, and foreign direct and portfolio investments.

About the Survey

The survey response rate is 75.1 percent.

The Q2 2010 BES was conducted during the period 5 April – 7 May 2010. There were 1,632 firms surveyed nationwide. Respondents were drawn from the Securities and Exchange Commission's Top 7,000 Corporations, as follows: 603 companies in NCR (36.9 percent) and 1,029 firms in AONCR (63.1 percent), covering all 17 regions nationwide. The survey response rate for this quarter was 75.1 percent. For NCR, the response rate was 75.3 percent (from 77.6 percent last quarter); and for AONCR, the response rate was 74.9 percent (from 72.6 percent).

A breakdown of responses received by type of business showed that 12.0 percent were importers, 7.2 percent were exporters, and 13.6 percent were both importers and exporters. About two-thirds of the respondents were neither importers nor exporters or those that did not specify their firm type.

⁵ The expectations on Key Economic Indicators are confidence indices (CIs) computed as the percentage of firms that answered "up" less the percentage of firms that answered "down" with respect to their views on a given economic key indicator. A positive CI indicates a favorable view, except for the inflation rate and the peso-borrowing rate, where a positive CI indicates the opposite.
