

Consumer Expectations Survey

Fourth Quarter 2010

12/9/2010 4:23 PM

Consumer Confidence Rises to Four-Year High in Q4 2010

Nationwide Consumer Outlook

Consumer confidence is on the rise on the back of strong macroeconomic fundamentals.

The overall consumer confidence index (CI)¹ continued to improve for the second consecutive quarter, climbing to -8.5 percent in Q4 2010 from -14.0 percent in Q3 2010. This was the highest reading recorded since the nationwide Consumer Expectations Survey started in 2007. The sustained rise in consumer confidence was supported by the better-than-expected GDP growth for the first three quarters of the year at 7.5 percent, which exceeds the full-year government forecast of 5-6 percent. According to respondents, their favorable outlook is due to expectations of better job opportunities, new investments, higher income, good governance, and a low rate of inflation. The buoyant current quarter outlook reflected the rising optimism of consumers in the United States, Canada, Germany, Italy, France, Brazil, Singapore, India, and South Korea.

However, the confidence index for Q4 2010 stayed in the negative territory as the pessimists outnumbered the optimists, especially those in the low-income group who attributed their unfavorable sentiment to lack of employment and insufficient income.

¹ The Consumer Expectations Survey (CES) is a quarterly survey of a random sample of 5,000 households in the Philippines. Results of the CES provide advance indication of consumer sentiments for the current and next quarters and the year ahead as reflected in the overall CI, as well as in selected economic indicators.

² The CI is computed as the percentage of households that answered in the affirmative less the percentage of households that answered in the negative with respect to their views on a given indicator. A positive CI indicates a favorable view, except for the inflation rate and the peso-borrowing rate, where a positive CI indicates the opposite. The overall consumer CI measures the average direction of change in three indicators - overall conditions of the economy, household finances, and household income.

For the next quarter and the year ahead, consumer sentiments were less upbeat as the CIs declined compared to their quarter-ago levels, to 11.9 percent (from 15.3 percent) and 25.9 percent (from 33.4 percent), respectively. However, the next quarter- and next 12 month-CIs remained positive at double-digit levels for the second time in a row, suggesting that respondents expected sustained although slower economic growth in 2011. Their expectations could be due to seasonally lower consumer demand in the first quarter of the year and the strong headwinds coming from the weaknesses of the European and American economies.

Consumer optimism regarding the country's economic condition, family income and family finances are at their highest levels.

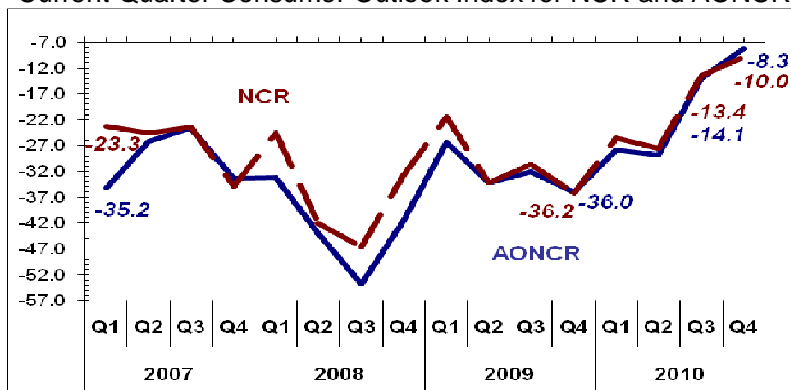

Consumer optimism across all three indicators—economic condition of the country, family income, and family financial situation—were at record highs, indicating that respondents expect increased family income and finances from a broad-based and more inclusive growth of the economy. Reflecting the overall consumer outlook in the near term and the year ahead, consumer confidence across all three indicators for the next quarter and the next 12 months remained positive at double digit levels, but were also less favorable compared to the previous quarter's survey results.

Positive consumer sentiments are observed across income groups.

For the current quarter, consumer sentiments across all income groups (high, middle and low) climbed to their highest levels.² The outlook remained positive for all income brackets in the near term and the year ahead. Consumer confidence was stronger for the high-income respondents but weaker for those in the middle- and low-income levels.

NCR and AONCR Consumer Outlook

Current Quarter Consumer Outlook Index for NCR and AONCR

² Low-income group refers to households with monthly family income of less than ₱10,000; middle-income group, ₱10,000 – ₱29,999; and high-income group, ₱30,000 and over.

Consumer confidence in both NCR and AONCR continue to pick up.

Consumer confidence in both the National Capital Region (NCR) and Areas Outside NCR (AONCR) continued to pick up to hit record highs in Q4 2010. Even as the optimists dominated the pessimists in the next quarter and over the course of the next 12 months for both NCR and AONCR, their number declined relative to those with a negative outlook.

For the current quarter, the favorable outlook of NCR and AONCR respondents was observed across all the three dimensions: economic conditions, family financial situation and family income. However, the next quarter and year-ahead outlook of both NCR and AONCR respondents on the three dimensions were less upbeat compared to the last survey. NCR respondents were generally less optimistic than their counterparts in AONCR for the current and next quarters, but were more optimistic in the year ahead across all three dimensions.

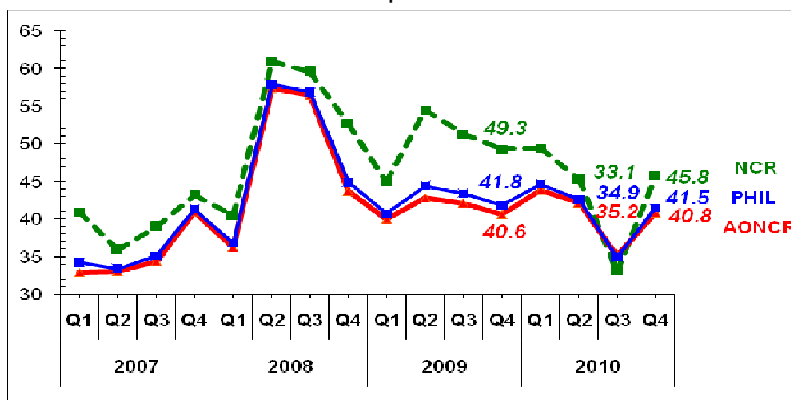

Expenditures on Basic Goods and Services

Expenditures on basic goods and services are expected to rise in Q1 2011.

More households expected that their expenditures on basic goods and services would go up in Q1 2011. Respondents nationwide expected to increase their expenditures on all types of basic goods and services. Increased expenditures were particularly expected in food, electricity, fuel, personal care and effects, and transportation, indicating that appreciable inflationary pressures could come from these goods and services.³ The lowest expenditures sentiments were anticipated in house rent, hotel and restaurant as well as communication services.

By geographic location, the expenditure outlook of AONCR and NCR consumers mirrored the pattern at the national level. However, NCR consumers anticipated higher expenditures for water services due to the expected water shortages in some parts of Metro Manila.

Confidence Index: Expenditures Next Quarter

³ Expenditures on personal care and effects include expenses for beauty aids, toilet articles, jewelry, umbrella, handbag, wallet, beauty parlor or barbershop services, baby care and other personal care and services.

Expenditures on Big-ticket items

Buying conditions for consumer durables and motor vehicles improve while those for housing are less favorable.

The percentage of households that considered the current quarter as a favorable time to buy big-ticket items declined marginally relative to a quarter ago due largely to the decline in the buying conditions for housing in both NCR and AONCR. Meanwhile, buying conditions for motor vehicles and consumer durables improved. Respondents attributed the favorable outlook to easy installment payments and prevailing low interest rates offered by banks and dealers/merchants.

Buying Intentions

Buying intentions on consumer durables and motor vehicles for the year ahead improve.

The buying intentions of consumers improved for the next 12 months. In particular, buying intentions in both NCR and AONCR for consumer durables and motor vehicles improved, offsetting the decline in buying intentions for housing.

Consumers' buying intentions were more robust in AONCR compared to that in NCR.

Selected Economic Indicators

Over the next 12 months, respondents expect the peso to continue to appreciate and inflation, interest rates and unemployment to go up.

Consumers anticipated that the peso would continue to appreciate against the US dollar in the year ahead, in line with expectations of continued strong inflows of foreign exchange, particularly from overseas Filipinos' remittances. Inflation and interest rates were also expected to rise. Respondents expected inflation to increase to 7.6 percent over the course of the next 12 months (from 5.7 percent in the last quarter's survey). The inflation outlook of consumers could be attributed to the expected acceleration of fuel prices, which they expect would pull up the prices of basic goods in the next 12 months. More consumers expected unemployment rate to rise, consistent with their expectation of a possible slowdown of the economy in the year ahead.

Expenditures of Overseas Filipino Workers (OFWs)

OFW households that utilized their remittances for food, education, and savings increase in Q4 2010.

Similar to the previous survey results, the bulk of OFW households (96.7 percent) used remittances for food. More than 70 percent of the households (72.6 percent) allocated their remittances for education, 61.1 percent for medical payments and 49.8 percent for debt payments. The percentage of OFW households that utilized their remittances to savings climbed to 43.7 percent (from 43.0 percent in Q3 2010 and from only 7.2 percent in Q1 2007). Meanwhile, the percentage that

apportioned part of their remittances to purchase consumer durables, houses and lots, and motor vehicles declined compared to the previous quarter's results.

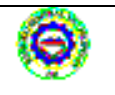

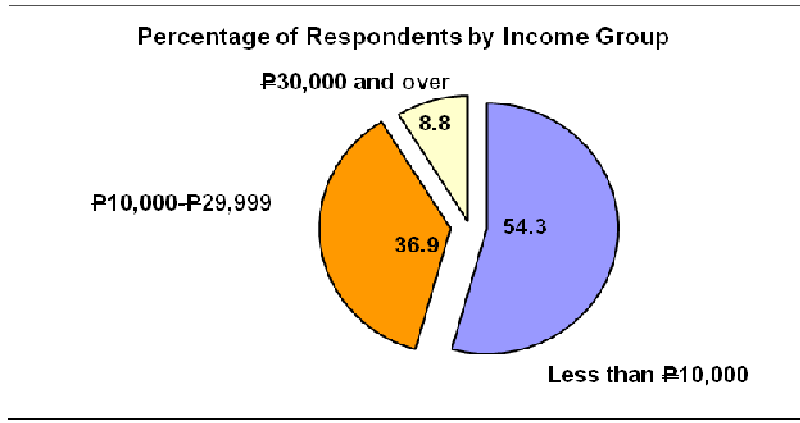

The utilization pattern of remittances was broadly similar for both NCR and AONCR. However, respondents have different views on their expenditures. The purchase of consumer durables and motor vehicles as well as placements in savings and investment increased in AONCR but declined in the NCR.

About the Survey

Survey respondents total 5,833 households nationwide.

The Bangko Sentral ng Pilipinas started the Consumer Expectations Survey (CES) in the National Capital Region in Q3 2004. The CES was expanded into a nationwide survey beginning Q1 2007. The CES samples were drawn from the National Statistics Office's (NSO) Master Sample List of Households, which is considered a representative sample of households nationwide. The said master sample was generated using a stratified multi-stage probability sampling scheme. For Q4 2010, the CES was conducted during the period 1-15 October 2010 with a total sample size of 5,833 households, of which 3,004 (51.5 percent) were from the NCR and 2,829 (48.5 percent) from the AONCR.

The nationwide total survey response rate for Q4 2010 was 96.7 percent (from 96.6 percent in the last quarter's survey). By area, the response rate was 96.5 percent in NCR and 97.0 percent in AONCR. Majority of the respondents (54.3 percent) were from the low-income group, 36.9 percent were from the middle-income group, and 8.8 percent belonged to the high-income group.
