NOTES:

¹ The BSP's Senior Bank Loan Officers' Survey consists of questions related to the general credit standards of commercial banks in the Philippines, as well as factors affecting the credit supply of and demand for loans by both enterprises and households. The BSP has been conducting this survey since Q1 2009 to enhance its understanding of banks' lending behavior, which is an important indicator of the strength of economic activity. The survey also helps the BSP assess the effectiveness of bank lending as a transmission channel of monetary policy.

² The change in credit standards is measured using a Diffusion Index for Credit Standards. A positive Diffusion Index for Credit Standards indicates that more banks have tightened credit standards compared to those that eased ("net tightening"), whereas a negative Diffusion Index for Credit Standards indicates that more banks have eased credit standards compared to those that tightened ("net easing").

³ Diffusion Index for Credit Standards = [percentage of respondents selecting "widened considerably" + percentage of respondents selecting "widened somewhat"] - [percentage of respondents selecting "narrowed considerably" + percentage of respondents selecting "narrowed somewhat"]

⁴ Diffusion Index for Credit Standards = [percentage of respondents selecting "reduced considerably" + percentage of respondents selecting "reduced somewhat"] - [percentage of respondents selecting "increased considerably" + percentage of respondents selecting "increased somewhat"]

⁵ Diffusion Index for Credit Standards = [percentage of respondents selecting "tightened considerably" + percentage of respondents selecting "tightened somewhat"] - [percentage of respondents selecting "eased considerably" + percentage of respondents selecting "eased somewhat"]

⁶ Diffusion Index for Credit Standards = [percentage of respondents selecting "shortened considerably" + percentage of respondents selecting "shortened somewhat"] - [percentage of respondents selecting "lengthened considerably" + percentage of respondents selecting "lengthened somewhat"]

⁷ More use implies tightening.

⁸ "Diffusion Index for Loan Demand" refers to the percentage difference between banks reporting an increase in loan demand and banks reporting a decrease. A positive Diffusion Index for Loan Demand indicates that more banks reported an increase in loan demand compared to those stating the opposite, whereas a negative Diffusion Index for Loan Demand implies that more banks reported a decrease in loan demand compared to those reporting an increase.

⁹ Diffusion Index for Loan Demand = [percentage of respondents selecting "Contributed considerably to higher demand" + percentage of respondents selecting "Contributed somewhat to higher demand"] - [percentage of respondents selecting "Contributed considerably to lower demand" + percentage of respondents selecting "Contributed somewhat to lower demand"]

NOTES:

- ¹ The BSP's Senior Bank Loan Officers' Survey consists of questions related to the general credit standards of commercial banks in the Philippines, as well as factors affecting the credit supply of and demand for loans by both enterprises and households. The BSP has been conducting this survey since Q1 2009 to enhance its understanding of banks' lending behavior, which is an important indicator of the strength of economic activity. The survey also helps the BSP assess the effectiveness of bank lending as a transmission channel of monetary policy.
- ² The change in credit standards is measured using a Diffusion Index for Credit Standards. A positive Diffusion Index for Credit Standards indicates that more banks have tightened credit standards compared to those that eased ("net tightening"), whereas a negative Diffusion Index for Credit Standards indicates that more banks have eased credit standards compared to those that tightened ("net easing").
- ³ Diffusion Index for Credit Standards = [percentage of respondents selecting "widened considerably" + percentage of respondents selecting "widened somewhat"] - [percentage of respondents selecting "narrowed considerably" + percentage of respondents selecting "narrowed somewhat"]
- ⁴ Diffusion Index for Credit Standards = [percentage of respondents selecting "reduced considerably" + percentage of respondents selecting "reduced somewhat"] - [percentage of respondents selecting "increased considerably" + percentage of respondents selecting "increased somewhat"]
- ⁵ Diffusion Index for Credit Standards = [percentage of respondents selecting "tightened considerably" + percentage of respondents selecting "tightened somewhat"] - [percentage of respondents selecting "eased considerably" + percentage of respondents selecting "eased somewhat"]
- ⁶ Diffusion Index for Credit Standards = [percentage of respondents selecting "shortened considerably" + percentage of respondents selecting "shortened somewhat"] - [percentage of respondents selecting "lengthened considerably" + percentage of respondents selecting "lengthened somewhat"]
- ⁷ More use implies tightening.
- ⁸ "Diffusion Index for Loan Demand" refers to the percentage difference between banks reporting an increase in loan demand and banks reporting a decrease. A positive Diffusion Index for Loan Demand indicates that more banks reported an increase in loan demand compared to those stating the opposite, whereas a negative Diffusion Index for Loan Demand implies that more banks reported a decrease in loan demand compared to those reporting an increase.
- ⁹ Diffusion Index for Loan Demand = [percentage of respondents selecting "Contributed considerably to higher demand" + percentage of respondents selecting "Contributed somewhat to higher demand"] - [percentage of respondents selecting "Contributed considerably to lower demand" + percentage of respondents selecting "Contributed somewhat to lower demand"]

NOTES:

1

The BSP's Senior Bank Loan Officers' Survey consists of questions related to the general credit standards of commercial banks in the Philippines, as well as factors affecting the credit supply of and demand for loans by both enterprises and households. The BSP has been conducting this survey since Q1 2009 to enhance its understanding of banks' lending behavior, which is an important indicator of the strength of economic activity. The survey also helps the BSP assess the effectiveness of bank lending as a transmission channel of monetary policy.

2

The change in credit standards is measured using a Diffusion Index for Credit Standards. A positive Diffusion Index for Credit Standards indicates that more banks have tightened credit standards compared to those that eased ("net tightening"), whereas a negative Diffusion Index for Credit Standards indicates that more banks have eased credit standards compared to those that tightened ("net easing").

3

Diffusion Index for Credit Standards = [percentage of respondents selecting "widened considerably" + percentage of respondents selecting "widened somewhat"] - [percentage of respondents selecting "narrowed considerably" + percentage of respondents selecting "narrowed somewhat"]

4

Diffusion Index for Credit Standards = [percentage of respondents selecting "reduced considerably" + percentage of respondents selecting "reduced somewhat"] - [percentage of respondents selecting "increased considerably" + percentage of respondents selecting "increased somewhat"]

5

Diffusion Index for Credit Standards = [percentage of respondents selecting "tightened considerably" + percentage of respondents selecting "tightened somewhat"] - [percentage of respondents selecting "eased considerably" + percentage of respondents selecting "eased somewhat"]

6

Diffusion Index for Credit Standards = [percentage of respondents selecting "shortened considerably" + percentage of respondents selecting "shortened somewhat"] - [percentage of respondents selecting "lengthened considerably" + percentage of respondents selecting "lengthened somewhat"]

7

More use implies tightening.

8

"Diffusion Index for Loan Demand" refers to the percentage difference between banks reporting an increase in loan demand and banks reporting a decrease. A positive Diffusion Index for Loan Demand indicates that more banks reported an increase in loan demand compared to those stating the opposite, whereas a negative Diffusion Index for Loan Demand implies that more banks reported a decrease in loan demand compared to those reporting an increase.

9

Diffusion Index for Loan Demand = [percentage of respondents selecting "Contributed considerably to higher demand" + percentage of respondents selecting "Contributed somewhat to higher demand"] - [percentage of respondents selecting "Contributed considerably to lower demand" + percentage of respondents selecting "Contributed somewhat to lower demand"]
